

## FutureGuide™-LWP plus-200

Compliant with ITU-T G.657.A1 / G.652.D

We offer the FutureGuide™-LWP plus-200 optical fiber with a coating diameter of 200 μm. This fiber has been designed to maintain a mode field diameter (MFD) of 9.2 μm at 1310 nm, with tolerable macrobend performance exceeding ITU-T G.657.A1. This is made possible by Fujikura's innovative optical fiber coating technology, and the fiber's ITU-T G.652.D compliant low (zero) water peak attenuation supports full-band transmission (O, E, S, C, and L-band).

FutureGuide™-LWP plus-200 helps not only designing high-density (e.g. higher fiber count and smaller diameter) optical fiber cables but also saving costs of manufacturing, transporting and installing cables. Furthermore, its compatible MFD with conventional ITU-T G.652 fibers would realize deployment of new cables into existing networks without any troubles.

### Features

- Reduced coating diameter down to 200 μm with maintaining equivalent performance as 250 μm fibers.
- Reduced attenuation characteristics compared MFD compatibility with conventional G.652 fibers.
- Improved macrobending performance exceeding ITU-T G.657.A1.

### Customer's advantages

- Realizes aggressive design for higher-density cable. (e.g. reduced-diameter and/or high fiber-count cables)
- Helps efficient deployment and replacement of cables into existing networks.
- Saves enclosing space at the point of connecting cables. Reduces momentary interruption during connecting work.
